PROFESSIONAL SUMMARY

Fresh Informatics Engineering graduate from ITB with internship and project experience building REST backends in Java (Spring Boot), TypeScript, Go, and Python with PostgreSQL, Docker, and CI/CD, plus AI systems such as a RAG-based academic chatbot and an LLM-gated risk system via OpenRouter. Experienced in delivering internal tools that replace manual workflows, in working with PMs, UI/UX, and frontend teams from requirements to release, and in using AI-assisted tools to speed up development and debugging.

EDUCATION

Institut Teknologi Bandung | Informatics Engineering **July 2022 - August 2026**

- GPA 3.36

WORK EXPERIENCE

Software Engineer Intern | PT Toyota Motor Manufacturing Indonesia (TMMIN) **August 2026 - Present**

- Engineered a "Supplier Problem" system for the Engine Production Karawang Division using Power Apps, Power Automate, and SharePoint, replacing a manual, undocumented process with one digital workflow, now in trial with 16 users and live supplier correspondence.
- Developed and adapted 9 Power Automate workflows with Office Scripts to automate problem sheet generation, supplier emails, reply tracking, and reminders, and to sync every case to a KRW recap that lets PUD Purchasing rank suppliers by problem frequency.
- Designed a QMS Dashboard (Vue 3, TypeScript, Hono, PostgreSQL, Docker) to replace redundant manual logging across 8 QC data sources and 3 disconnected systems, with an interactive mockup for stakeholder review.
- Authored a Toyota Business Practices proposal for a record-once, auto-recap QC workflow, projecting steps per item job to drop from 19 to 14 and manual write-ups from 10 to zero.

Software Engineer Intern | PT. Akhdani Reka Solusi **June 2025 - September 2025**

- Collaborated with a fellow intern to develop the Project Management Module for AHER (Akhdani HR), giving management unified visibility over project tracking and task ownership across all internal operations for the first time.
- Engineered a scalable backend using Java Spring Boot, implementing RESTful APIs and optimizing database interactions with PostgreSQL and LeafDB.
- Created complex database schemas to handle Work Breakdown Structures (WBS), task hierarchies, and master data management.
- Partnered with the UI/UX team to translate design specifications into production-ready Thymeleaf/Bootstrap interfaces, delivering screens that passed stakeholder acceptance testing within the project timeline.

IT Associates | Google Developer Groups on Campus ITB **April 2025 - October 2025**

- Co-architected and delivered the RESTful API backend for GDGoC ITB's LMS alongside one engineer, enabling core platform operations including user management, course delivery, and event handling.
- Designed and built a task submission system, including a Command Line Interface (CLI) tool published globally via npm, to facilitate efficient and standardized problem set submissions for users.
- Served as the primary backend liaison to the frontend team, defining API contracts and resolving integration blockers to maintain consistent data flow across the platform.

Frontend Engineer | Ganesha Interactive Media (GIM) ITB **Feb 2025 - August 2025**

- Delivered GIM ITB's "Our Works" archive from zero, replacing manually maintained static pages with a fully dynamic, API-driven content system across four categories (Game, Visual Art, Audio Art, Story).
- Implemented dynamic tag-based content fetching to populate work archives across all content categories, replacing static data with API-driven rendering.
- Refactored Visual Art and Audio Art into a shared WorkCard component, eliminating duplicated logic across two sections and ensuring visual consistency without parallel maintenance overhead.

Software Engineer | Bandung Tennis Enthusiast (BEAST) **January 2025 - May 2025**

- Built BEAST's first digital platform, replacing manual spreadsheet membership tracking, offline event coordination, and trainer notes with a unified web system serving the active sports community.
- Implemented secure user authentication and authorization using JWT and Google OAuth 2.0.

- Designed a normalized PostgreSQL schema with Prisma ORM and deployed the full stack with Docker, establishing CI/CD pipelines that removed manual deployment steps and enabled continuous delivery.

PROJECTS

Academic Chatbot ITB - RAG-Based System **Oct 2025 - July 2026**

- Architected a RAG-based Academic Chatbot as an Undergraduate Thesis using FastAPI and React with Server-Sent Events (SSE) streaming, seamlessly integrating with a Core AI microservice via REST APIs.
- Engineered a distributed corpus synchronization pipeline between PostgreSQL and ChromaDB vector database, ensuring the AI strictly serves answers grounded in the most up-to-date campus regulations.
- Built an answer provenance tracking module using contextual document snapshots, guaranteeing that every AI-generated response can be independently traced back to official institutional sources for accountability.

RYOKAN - AI Risk Accountability System **May 2026**

- Built an AI-powered pre-trade accountability system that enforces structured thesis evaluation against live Binance market data before any risk calculation is permitted, eliminating emotionally-driven trade entries.
- Designed a hard-gating mechanism using OpenRouter that blocks position sizing entirely until the trade thesis passes structural validation, making undisciplined entries architecturally impossible.
- Developed a 3-tier risk matrix engine for real-time position sizing, liquidation, and R:R analysis, deployed on Vercel.

TECHNICAL SKILLS

- **Programming Languages:** Python, C++, C, Go, Java, JavaScript, TypeScript, Dart, Kotlin.
- **Frameworks & Libraries:** Spring Boot, Node.js, Express.js, Hono, React.js, Next.js, Vue.js, Flutter, Tailwind CSS, Bootstrap, Hardhat.
- **Databases & Infrastructure:** PostgreSQL, MongoDB, Docker, Nginx.
- **Tools:** Git (Github/Gitlab), DBeaver, Vercel, Figma, Postman.
- **Languages:** English, Indonesia.

ORGANIZATIONS

Staff of Career Development Division | Himpunan Mahasiswa Informatika (HMIF) ITB **August 2024 - July 2025**

- Designed and ran career mentoring programs connecting ITB Informatics students with industry alumni, bridging the gap between academic study and professional expectations.
- Coordinated with alumni speakers to deliver career development insights for students.
- Compiled and produced an internship testimonial booklet from senior students' experiences, creating a reusable reference resource for incoming cohorts preparing for their first industry placements.
